Introduction

Evaluating
expressions

Linguistic
associations

GUHA quantifiers
Rule reduction

FT

Associations
using FT

LFLC

Experiments

Linguistic
associations
NO₂ FT associations

Future work

Method for finding linguistically characterized associations in large databases.

Example:

high *profit* and **rather low** *cost*

~

very high *productivity* and **significantly large** *volume of sale*

Characteristic feature — **evaluating linguistic expressions and predications**

Introduction

Evaluating
expressions

Linguistic
associations

GUHA quantifiers
Rule reduction

FT

Associations
using FT

LFLC

Experiments

Linguistic
associations
NO₂ FT associations

Future work

Evaluating linguistic predication

$\langle \text{noun phrase} \rangle$ is \mathcal{A} or \mathcal{A} $\langle \text{noun phrase} \rangle$

Example: $\langle \text{temperature of melted metal} \rangle$ is *very high*
very high $\langle \text{temperature of melted metal} \rangle$

$$\mathcal{C} := \bigwedge_{i \in I} (\mathcal{A}_i X_i) \quad \mathcal{D} := \bigvee_{i \in I} (\mathcal{B}_i X_i)$$

$$\mathcal{E} := \bigvee_{j \in J} \mathcal{C}_j \quad \mathcal{F} := \bigwedge_{j \in J} \mathcal{D}_j$$

\bigwedge — linguistic conjunction (“and”),

\bigvee — linguistic disjunction (“or”)

- Continuous function $f(x) : w \rightarrow \mathbb{R}$, $w = [v_L, v_R]$
- $f(x)$ known at points x_1, \dots, x_N
- equidistant nodes $x_{0,1}, \dots, x_{0,n}$
- n fuzzy numbers F_{n_ν, x_0} (basic functions) — covering of w (extensions of “approximately x_0 ”)

Direct F-transform Values of $f(x)$ transformed into n -tuple of components $[F_1, \dots, F_n]$

$$F_k = \frac{\sum_{j=1}^N f(x_j) F_{n_\nu, x_{0k}}(x_j)}{\sum_{j=1}^N F_{n_\nu, x_{0k}}(x_j)}, \quad k = 1, \dots, n.$$

Inverse F-transform Transform $[F_1, \dots, F_n]$ back

$$f_{F,n}(x) = \sum_{k=1}^n F_k \cdot F_{n_\nu, x_{0k}}(x_j).$$

if n increases then $f_{F,n}(x_j)$ converges to $f(x_j)$

Purpose of LFLC2000 software

LFLC2000 (Linguistic Fuzzy Logic Controller) is an universal software system dedicated primarily for designing and testing of linguistic descriptions, i.e. systems of fuzzy IF-THEN rules.

Originated by Vilém Novák in 1990's.
Developed in IRAFM, University of Ostrava.

LFLC offers unique methodology based on theoretical achievements from IRAFM members.

A1. $(X_1 \text{ is } MLMe) \text{ AND}(X_2 \text{ is } VeSm)$
 $\text{AND}(X_3 \text{ is } MLSm) \sqsubset_{0.01}^{0.5} (Z \text{ is } MLMe)$

A2. $(X_1 \text{ is } VeBi) \text{ AND}(X_2 \text{ is } MLSm)$
 $\text{AND}(X_3 \text{ is } MLSm) \sqsubset_{0.01}^{0.5} (Z \text{ is } MLBi)$

A3. $(X_1 \text{ is } Bi) \text{ AND}(X_2 \text{ is } -MLSm)$
 $\text{AND}(X_3 \text{ is } MLMe) \sqsubset_{0.01}^{0.5} (Z \text{ is } MLBi)$

A4. $(X_1 \text{ is } Bi) \text{ AND}(X_2 \text{ is } MLSm)$
 $\text{AND}(X_3 \text{ is } MLMe) \sqsubset_{0.01}^{0.5} (Z \text{ is } MLBi)$

Reduction of A3 and A4 to

$(X_1 \text{ is } Bi \text{ AND}(X_2 \text{ is } (MLS\text{m OR } -MLS\text{m})))$
 $\text{AND}(X_3 \text{ is } MLMe) \sqsubset_{0.01}^{0.5} (Z \text{ is } MLBi)$
